Roman Sarviro

Senior React / React Native Developer

PROFESSIONAL SUMMARY

- **5+ years of commercial experience** developing mobile (React Native) and web applications (React / Next.js) across the full software development lifecycle.
- Hands-on experience building Native Modules (Swift, Java/Kotlin) to extend React Native's core capabilities and overcome critical platform-level limitations.
- Experience designing application architecture, breaking down complex technical tasks, conducting code reviews, and optimizing development processes.
- Deep expertise in State Management & Data Fetching: Redux (RTK Query, Toolkit), MobX, Zustand, TanStack Query, Apollo Client.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, React, React Native, Expo, Next.js.
- State Management & Data Fetching: Redux Toolkit (RTK Query), MobX, Zustand, Apollo Client (GraphQL), GraphQL Codegen, TanStack Query.
- Native Development: Swift, Java (Kotlin).
- Tools & Ecosystem: React Navigation, Electron, FlashList, MMKV, Async Storage, React Hook Form, Formik, Zod, Yup, React Native Reanimated, React Native Gesture Handler, Lottie, Fast Image, i18next (Next-intl), Axios, Android Studio, Xcode.
- Infrastructure & DevOps: Git, GitLab, GitHub, Bitbucket, React Native Firebase, Sentry, Jira, Confluence, Scrum, Kanban.

EDUCATION

- **Vitebsk State University**
    - **Specialization:** Software Engineering for Information Technologies
    - Qualification: Software Engineer

PROFESSIONAL EXPERIENCE

Project #7: BabyHelper — Mobile Ecosystem for Young Parents

- **Role:** Senior React Native Developer.
- Technologies: React Native, React Navigation, FlashList, MMKV, MobX, MobX Persist Store, Axios, Swagger TypeScript Api, Yup, React Hook Form, React Native Gesture Handler, React Native Reanimated, Lottie, React Native Firebase, Fast Image.
- Results & Business Value:
    - Established development workflows, task decomposition, and accurate estimation processes; built a code review culture and a structured approach to technical debt, helping the product overcome a critical stagnation phase.
    - Acted as a crisis engineer: conducted a large-scale audit and refactoring of the legacy architecture, removing more than 6,000 lines of redundant code and eliminating 15+ outdated and incompatible third-party libraries and SDKs. Restructured the API request architecture together with the backend team.
    - Comprehensive application performance optimization reduced the final bundle size and accelerated cold start (time to enter the app) by approximately 15x.
    - Planned and successfully implemented the migration to the New React Native Architecture (Fabric, TurboModules, JSI), fully eliminating the overhead of the legacy Bridge and enabling lazy loading of native modules.
    - Identified and fixed critical bugs in key tracking sections, directly improving user retention and contributing to higher App Store and Google Play ratings.
    - Designed and integrated a full Dark Mode experience across the application, significantly improving the user experience (UX) at night.

Project #6: Поле.рф — Digital Transformation Platform for Agriculture

- **Role:** Senior Frontend Developer.
- Technologies: React (Express), Expo, React Native, FlashList, MMKV, Zustand, TanStack Query, React Hook Form, Zod, React Native Firebase.
- Results & Business Value:
    - Designed the architecture and successfully launched a mobile application from scratch using Expo, seamlessly bringing key ecosystem services to mobile to expand the platform's mobile audience.
    - Designed and implemented an end-to-end push notification system from scratch for timely user communication and audience retention.
    - Completely redesigned and updated key web interfaces, including the homepage and the “Journal” section, improving visual appeal and usability for end users.
    - Developed an administrative panel for dynamic management of homepage and journal content, allowing the content team to update data in real time without developer involvement.
    - Successfully published the mobile applications, passed store review, and released them on Google Play and the App Store.

Project #5: A4ord (German FinTech Startup) — Banking Application & Marketplace

- **Role:** Senior Frontend Developer.
- Technologies: React Native, Swift, Java / Kotlin, React Navigation, Async Storage, MobX, MobX Persist Store, Apollo Client, GraphQL, GraphQL Codegen, React i18next, Formik, Yup, Sentry / Next.js, Zustand, Apollo Client, GraphQL, Next-intl, React Hook Form, Yup, Tailwind CSS.
- Results & Business Value:
    - Led the mobile development team: established standard management and planning processes, including task creation, accurate estimation, decomposition and allocation, as well as regular code reviews, improving sprint transparency and release stability.
    - In parallel, contributed to the startup's web development by building the frontend of a multilingual marketplace with Next.js, enabling strong SEO performance and fast page rendering through SSR.
    - Implemented critical security modules for the fintech platform at the intersection of native and JavaScript code: hardware-backed Keychain (Secure Enclave) / Keystore integration and strict device binding.
    - Implemented banking-grade security requirements: 3D Secure (3DS) for secure transactions, SSL Pinning to protect against MITM attacks, and a Smart Agent module for fraud detection.
    - Designed a reliable error-handling system and a push notification module to keep users informed about installment status and transactions in real time.

Project #4: ChaChat (part of Neiro.ai) — Mobile AI Chat Assistant

- **Role:** Senior React Native Developer.
- Technologies: React Native, React Navigation, Zustand, TanStack Query, React Native Firebase, React Native Reanimated.
- Results & Business Value:
    - Joined an ambitious AI startup backed by investors with a background in developing virtual masks for Snapchat during the peak demand for AI characters during the lockdown period.
    - Took over cross-platform mobile development for iOS and Android, quickly identifying and resolving a range of critical bugs in real-time chat logic, stabilizing the product ahead of a major promotion campaign.
    - Implemented a secure OAuth 2.0 authentication system with seamless Apple Sign-In and Google Authentication, reducing friction for new users and increasing sign-up conversion.
    - Developed an interactive real-time chat module based on WebSockets with dynamic message rendering, minimizing network latency and ensuring smooth scrolling with large conversation histories.
    - Integrated product analytics tools by setting up user behavior events and conversion funnels in chats, giving the product team visibility into retention and enabling data-driven decisions.

Project #3: GZKtur — Travel Portal

- **Role:** Senior React Native Developer.
- Technologies: React Native, React Navigation, Redux Toolkit, Apollo Client, GraphQL, React Native Maps, Geolocation Service, Geolib, React Native Track Player, Async Storage, React i18next, Formik, Yup, React Native Reanimated.
- Results & Business Value:
    - Designed and implemented a scalable mobile application architecture from scratch, ensuring modular independence and easy integration of new services.
    - Developed and launched interactive commercial modules: tour search, booking, and end-to-end tour purchasing, as well as a hiking navigation module with maps, audio guides, and geolocation.
    - Developed and launched the standalone interactive application “Bylinny Path” with built-in game quests, expanding the company's product portfolio.
    - Successfully prepared and published both products on Google Play and the App Store.

Project #2: RCM — Professional Application for the US Auto Financing Industry

- **Role:** React Native Developer.
- Technologies: Expo, React Native, Electron, React, Async Storage, Redux Toolkit, RTK Query, React Native Maps, Geolocation Service, Geolib, Formik, Yup.
- Results & Business Value:
    - Executed a complex migration from the Expo ecosystem to pure React Native CLI, removing platform limitations and enabling integration with low-level native libraries.
    - Performed comprehensive legacy code refactoring, reducing codebase size and the number of runtime errors, which significantly improved overall application performance.
    - Modernized the navigation system by upgrading React Navigation to a current version, eliminating critical navigation bugs and improving UI responsiveness.
    - Integrated biometric authentication and enabled cross-platform deployment across Desktop/Web environments using Electron, reducing the cost of maintaining separate product versions.

Project #1: Transparent Business (Unicorn Company) — Remote Work Monitoring Platform

- **Role:** Frontend Developer.
- Technologies: HTML5, SASS, JavaScript, jQuery.
- Results & Business Value:
    - Conducted comprehensive source-code refactoring and optimized Jade templates and JS scripts, resulting in a measurable improvement in web page load speed.
    - Successfully migrated the platform to responsive, cross-browser layouts, ensuring correct interface rendering across all categories of user devices.
    - Integrated multilingual support and performed basic SEO optimization (meta tag configuration), laying the foundation for organic traffic growth and global market scalability.
